## Growing Blueberries

Native to North America, blueberries are ornamental edibles that are easy to grow if given the right conditions. Plant them for a healthy harvest and a beautiful addition to the landscape.

## Soil

Blueberries grow wild where soil is high in organic matter and slightly acidic. Our local soil is typically lean and alkaline, so we need to amend it for blueberries.

- Planting in Ground: Dig a hole 2- $21 / 2$ times the width of the pot, and as deep as the pot. Blend the soil you dug out with enough E.B. Stone Azalea, Camellia \& Acid Planting Mix to make a 50-50 mixture. Mix E.B. Stone Sure Start into the soil at the bottom of the hole. Place the plant so that the soil in the pot is at the same level as the surrounding soil. Use your soil mixture to fill in around the root ball.
- Container planting: Blueberries do well planted in large containers. Use E.B. Stone Azalea, Camellia \& Acid Planting Mix as your potting soil, adding E.B. Stone Sure Start to the soil at the bottom of the pot. Plant so that the soil in the pot is at the same level as the surrounding soil.

## Sun

In Lamorinda and other hot-summer areas of Contra Costa County, blueberries grow best with morning sun and afternoon shade, or all-day filtered sun. They will scorch in full afternoon sun. In coastal areas of Alameda and Contra Costa Counties, blueberries can be planted in full sun or part shade.

## Water

Blueberries can't tolerate dry soil or poor drainage. Irrigate thoroughly each time you water, and don't let plants dry out completely.

## Fertilizer

Blueberries thrive with regular applications of E.B. Stone Organic Citrus \& Fruit Tree Food or E.B. Stone Organic Azalea, Camellia \& Gardenia Food. Feed every other month starting when growth begins in spring until after harvest, typically March, May, and July. Use half the recommended amount for plants in containers. Test the pH of your soil occasionally, and if it's creeping up, add Soil Sulfur to make it more acid. Aim for a pH of 4.5-5.5.

## Pruning

Prune your berries in winter. Remove low branches that will be hard to harvest. Prune back tall upright shoots to the height you want. Thin out the center of the plant to allow air and light penetration. Thin out weak and twiggy side branches, leaving one-half to two-thirds of them in place. Thinning will give you bigger, better berries on the remaining growth.

Blueberries, like many other fruiting plants, require a certain number of hours below $45^{\circ}$ to bear a good crop. Lamorinda and other cold-winter inland areas typically get 700-1100 cumulative chill hours, while coastal areas, such as Oakland, Berkeley, and parts of Martinez, only get 400-700 hours. If you choose a berry that requires more chilling hours than you get, you'll be disappointed in the yield.

## Pollination

All blueberries are partially self-fruitful, but you'll get more and larger berries if you plant two or more varieties for cross-pollination.

## Ripening Time

Different varieties start to ripen at different times during the season, with each producing ripe berries over the course of several weeks. Early varieties typically start ripening in May, mid-season in June, late season in July. If you plant more than one variety, we recommend choosing varieties that have different ripening times to extend your harvest.

## Variety Chart

| Ripening Time | Variety | Chill Hours Required | Size (Ht. x Wd) |
| :---: | :---: | :---: | :---: |
| Early | Bless your Heart | 450 | 4-5ft $\times 3-4 \mathrm{ft}$ |
| Early | Duke | 800-1000 | 5-7 ft $\times 5-7 \mathrm{ft}$ |
| Early | Earliblue | 500 | $4-5 \mathrm{ft} \times 4-5 \mathrm{ft}$ |
| Early | Misty | 300 | $4-6 \mathrm{ft} \times 4-6 \mathrm{ft}$ |
| Early | O'Neal | 400 | $5-6 \mathrm{ft} \times 5-6 \mathrm{ft}$ |
| Early | Patriot | 800-1000 | $4-6 \mathrm{ft} \times 4-6 \mathrm{ft}$ |
| Early | Polaris | 800-1000 | $4 \mathrm{ft} \times 4 \mathrm{ft}$ |
| Early | Reka | 1000 | $4-5 \mathrm{ft} \times 2.5-3.5 \mathrm{ft}$ |
| Early | Spartan | 800 | $5-6 \mathrm{ft} \times 4-5 \mathrm{ft}$ |
| Early | Tophat | 1000-1200 | $1-2 \mathrm{ft} \times 1-2 \mathrm{ft}$ |
| Early-Mid | Bountiful Delight | 300-500 | $2-3 \mathrm{ft} \times 2-3 \mathrm{ft}$ |
| Early-Mid | Cabernet Splash | 500 | $3-4 \mathrm{ft} \times 3-4 \mathrm{ft}$ |
| Early-Mid | Emerald | 250 | $5-6 \mathrm{ft} \times 5-6 \mathrm{ft}$ |
| Early-Mid | Jubilee | 400-500 | $4-6 \mathrm{ft} \times 4-6 \mathrm{ft}$ |
| Mid | Blueberry Glaze | 600 | $2-3 \mathrm{ft} \times 2-3 \mathrm{ft}$ |
| Mid | Bluecrop | 800 | $4-6 \mathrm{ft} \times 4-6 \mathrm{ft}$ |
| Mid | Bluejay | 800-1000 | 5-7 ft $\times 5-7 \mathrm{ft}$ |
| Mid | Mini Blues | 1000 | $5-6 \mathrm{ft} \times 3-4 \mathrm{ft}$ |
| Mid | Peach Sorbet | 300 | $1.5-2 \mathrm{ft} \times 1.5-2 \mathrm{ft}$ |
| Mid | Pink Icing | 500 | $3-4 \mathrm{ft} \times 3-4 \mathrm{ft}$ |
| Mid | Sharpblue | 200 | $5-6 \mathrm{ft} \times 4-6 \mathrm{ft}$ |
| Mid | Southmoon | 300-400 | $6 \mathrm{ft} \times 6 \mathrm{ft}$ |
| 2 crops: Mid, Late | Perpetua | 1000 | $4-5 \mathrm{ft} \times 4 \mathrm{ft}$ |
| Mid-Late | Bountiful Blue | 150-200 | $3-4 \mathrm{ft} \times 3-4 \mathrm{ft}$ |
| Mid-Late | Chandler | 800-1000 | 5-6 ft $\times 5-6 \mathrm{ft}$ |
| Mid-Late | Jelly Bean | 600 | 18-24 in $\times 18-24$ in |
| Mid-Late | Midnight Cascade | 450 | $18-24 \times 18-24$ |
| Mid-Late | Pink Lemonade | 300 | $4-5 \mathrm{ft} \times 5 \mathrm{ft}$ |
| Mid-Late | Nocturne | 100 | 5-6 ft $\times 5-6 \mathrm{ft}$ |
| Mid-Late | Northblue | 800-1000 | $2-3 \mathrm{ft} \times 2-3 \mathrm{ft}$ |
| Mid-Late | Sunshine Blue | 150 | $3 \mathrm{ft} \times 3 \mathrm{ft}$ |
| Late | Darrow | 500 | $4-6 \mathrm{ft} \times 4-5 \mathrm{ft}$ |
| Very Late | Elliot | 800 | $4-6 \mathrm{ft} \times 4-5 \mathrm{ft}$ |
